Based on IPR exceptions as interpreted by Bradshaw, Bowyer, Haufe (2010). The Intellectual Property Implications of Low-Cost 3D-Printing.

REPAIR MANIFESTO

WE HOLD THESE TRUTHS TO BE SELF-EVIDENT

IF YOU CAN'T FIX IT, YOU DON'T OWN IT.

REPAIR IS BETTER THAN RECYCLING

Making our things last longer is both more efficient and more cost-effective than mining them for raw materials.

REPAIR SAVES YOU MONEY

Fixing things is often free, and usually cheaper than replacing them. Doing the repair yourself saves you money.

REPAIR TEACHES ENGINEERING

The best way to find out how something works is to take it apart.

REPAIR SAVES THE PLANET

Earth has limited resources. Eventually we will run out. The best way to be efficient is to reuse what we already have.

REPAIR **CONNECTS**
PEOPLE AND THINGS

REPAIR IS WAR ON
ENTROPY

REPAIR IS
SUSTAINABLE

WE HAVE THE RIGHT: TO DEVICES THAT CAN BE OPENED TO CHOOSE OUR OWN REPAIR TECHNICIAN TO NON-PROPRIETARY FASTENERS
TO REPAIR DOCUMENTATION FOR TO REMOVE 'DO NOT REMOVE' STICKERS
EVERYTHING TO REPLACE ANY & ALL TO TROUBLESHOOTING INSTRUCTIONS & FLOWCHARTS
TO REPAIR THINGS IN THE PRIVACY OF OUR OWN HOMES TO ERROR CODES & WIRING DIAGRAMS TO AVAILABLE, REASONABLY-PRICED SERVICE PARTS

BECAUSE **REPAIR** IS INDEPENDENCE SAVES MONEY & RESOURCES REQUIRES CREATIVITY MAKES CONSUMERS INTO CONTRIBUTORS INSPIRES PRIDE IN OWNERSHIP

DIGITAL

RIGHT TO REPAIR

Fair Repair Legislation would give owners and independent repair shops ...

- access to service information, schematics, and repair manuals
- fair market access to diagnostic tools
- spare parts for a fair price
- critical security updates
- rights to unencumbered resale

The Right to Repair

- Fits with Magna Carta: «rights of commoners to manage their own resources»
- In line with the need for a sustainable future
- Allows endusers to tinker, modify and extend the product life
- *Encourage (require?) manufacturers to publish design files of spare parts*
- *Allow commercial use by unlicensed repair centres*
- *Avoid «wars on filesharing»*

Protect the Hardware Commons

- E.g. Arduino: CC BY-SA + trademark
- Copyleft virality?
- Patents? → prior art
- Comparing Design Sharing Platforms: **FKI Wiki**

Gun control?

pathogens?

© OpenTrons, <http://opentrons.com/>

<http://mix.bio/>

Professional amateurism?

(c) Frank Kolkman, Open Surgery: <http://opensurgery.net/>

How to regulate?

- Regulate 'access points'/gatekeepers: 3D printer manufacturers and online design repositories : desirable, possible?
- Get ISPs to monitor what users are doing online vis-à-vis 3D printing design files: desirable, possible?
- Self-regulation:
 - Danish 3D printing firm Create It REAL announced it had come up with a firearms component detection algorithm which can give 3D printers option to block gun parts;
 - example of Mega taking down the gun blueprint as well
 - **but still available on the dark web**

Liabilities

Example: A person gets injured by a bike made at a FabLab following an open design. Who's liable?

- Design author
- Machines
- Space / FabLab
- Builders

Privacy

- Big Data: User control over Personal Data
- Threat of Unravelling: Full Disclosure
- Government surveillance
- Anonymity
- Encryption

Other challenges

- Vehicle safety regulations
- Medical and product liability in Bioprinting
- Certifications like CE, FCC
